

(2-21-16)

**HARD-BOILED WOMEN & MILK-TOAST MEN:  
(THE GOAL OF PAGANS!)**

**TEXT: John 10:10** The thief cometh not, but for to steal, and to kill, and to destroy: I am come that they might have life, and that they might have it more abundantly.

**Luke 17:28** Likewise also as it was in the days of Lot...

"Perhaps by means of injections and drugs and chemicals the population could be induced to bear whatever its scientific masters may decide to be for its good."

(Bertrand Russell, *The Scientific Outlook*, 1931)

"Diet, injections, and injunctions will combine, from a very early age, to produce the sort of character and the sort of beliefs that the authorities consider desirable..."

(Bertrand Russell, *The Impact of Science on Society*, 1952)

"[The Gnostics teach that when] Eve separated from Adam, the original androgynous unity was broken. The purpose of Christ's coming was to reunite 'Adam' and 'Eve'...The Gnostic Jesus commends making 'the male and the female one and the same, so that the male not be male, nor the female female'...Death will be defeated when Adam attains his former androgynous self...In the *Gospel of Thomas* Salome declares to Jesus that she is his disciple. Jesus replies that since he is from the Undivided, his disciples will be 'undivided...filled with light, but if...divided...[they] will be filled with darkness.' [50] In the next saying, Jesus identifies this teaching as 'my mysteries'...Inevitably, the final saying, which brings these 'secret sayings...' to a conclusion, has Mary 'become a male'...Such androgynous spirituality has a close association with various pagan practices. Hippolytus witnessed it and documented the fact...they sought spiritually what the pagan priests realized physically...In this regard, **Gnostic spirituality also parallels Hindu spirituality...In Tantric or Kundalini Yoga, androgyny is also the goal...**The yogin...is thus transformed into a kind of androgyne...Influential Jungian psychologist and Gnostic convert, **June Singer**, in 1977 [boasted]...'We have at hand...**all the ingredients we will need**...to fuse the opposites within us...no longer as exclusively 'masculine' or 'feminine'...'..."

(Peter Jones, *Stolen Identity: The Conspiracy to Reinvent Jesus*)

-Egyptian priests were forbidden to eat onions. (Wilkinson, *Manners and Customs of the Ancient Egyptians*)

-Egyptian priests kept themselves clear of onions and garlic (Plutarch, etc.).

-Onions, and the other members of its family, are powerful testosterone builders in men.

-The *slaves* who built the pyramids, were fed onions, garlic and radishes. (Herodotus)

**Exodus 1:7** And the children of Israel **were fruitful, and increased abundantly, and multiplied, and waxed exceeding mighty;** and the land was filled with them.

9 And he said unto his people, Behold, the people of the children of Israel are more and mightier than we:

**Numbers 11:5** We remember the fish, which we did eat in Egypt freely; the cucumbers, and the melons, and **the leeks, and the onions, and the garlick:**

-Dietary guidelines for Mahayana Buddhism (China, Japan, Korea, Vietnam and Tibet) are found in Buddhist texts, or sutras:

"A disciple of the Buddha must not deliberately eat meat...A disciple of the Buddha should not eat...garlic, chives, leeks, onions..."

"Buddha explains why the 'Five Pungent Spices,' including garlic and onions, are not good for us (especially not good for celibate monks)."

-The five forbidden ones: Leeks, Scallions, Garlic, Onions, and Ginger - all powerful testosterone raisers in men.

"...the monks do not use garlic, ginger, onions or any type of spice when preparing their meals...From the demon's flesh emerged blooms of onions, garlic and other alliaceous plants. Hence, eating onion and garlic is similar to eating flesh."

-Almost all Mahayana monastics in China, Japan and Vietnam avoid eating strong-smelling plants (Brahamajala Sutra, Surangama Sutra, Lankavatara Sutra). This precept is often interpreted to include other members in the onion family, **as well as coriander**. Taoists, and followers of Hinduism and Jainism also do not consume pungent tasting foods.

"Lead poisoning is a worldwide health problem...The aim of this study was to access the efficacy of *Coriandrum sativum* (**coriander**) in reducing lead-induced changes in mice...Animal exposed to lead...[**had suppressed**] **testosterone level** [etc.]...These influences of lead were **prevented by concurrent daily administration of [Coriander/Cilantro]...**"

(<http://www.ncbi.nlm.nih.gov/pubmed/19902160>)

**Numbers 11:7** And the manna was as **coriander seed**...

-Spices linked to high testosterone in men: "Testosterone Levels Higher In Men Who Eat Spicy Foods"

"Brahmins...upper-caste Hindus...were enjoined to reject various *Allium* species, such as onion, garlic, and leeks...In India, anti-*Allium* sentiment occurred among the Jains and Buddhists...banned to Chinese Buddhists even today...and there is at least one Buddhist vegetarian dish especially fitting for monks because it **excludes garlic, scallions, and ginger**...[the banned Alliums] are also found among Taoists...Writing of Chinese Buddhist monks in the first half of this century, Welch...provides an even longer list of items **banned or usually avoided, including flesh, fish, eggs, milk products, onions and their relatives...**"

(Frederick J. Simoons, *Food in China: A Cultural and Historical Inquiry*)

**1 Timothy 4:1** Now the Spirit speaketh expressly, that in the latter times some shall depart from the faith, giving heed to seducing spirits, and doctrines of devils;  
2 Speaking lies in hypocrisy; having their conscience seared with a hot iron;  
3 Forbidding to marry, and **commanding to abstain from meats**, which God hath created to be received with thanksgiving of them which believe and know the truth.

"It has been urged that tea tends to effeminate the male..."

(*The New Lady's Magazine*, 1786)

"The direct lowering of testosterone levels may be a side effect of green tea...The Department of Physiology and Pharmacology in Brazil's Federal University specifically investigated the effect of green tea on testosterone production. They found that high levels of green tea inhibited the amount of testosterone hormone in rodents."

([www.livestrong.com](http://www.livestrong.com))

-Black tea also lowered testosterone in male mice (Planta Med 2013; 79 - PB30).

"Flavonoids are major compounds of *Aspalathus linearis* [rooibos] and *Camellia sinensis* [tea]. They are classified as **endocrine disruptors** and some have been shown to inhibit **testosterone production**. TM3 Leydig cell cultures were treated with...*A. linearis* (unfermented or fermented rooibos) or ***Camellia sinensis* (green or black tea)**...Under nonstimulated conditions, **all teas tend to decrease testosterone production**...under hCG-stimulation, **a significant reduction in testosterone production was observed at all concentrations by both rooibos and tea** (16.3-37.9%)...In conclusion, the results here demonstrate the **anti-androgenic property** of *A. linearis* and ***C. sinensis***." (Andrologia. 2015 Feb;47(1):52-8. doi: 10.1111/and.12221. Epub 2014 Jan 6.)

"...it is clear that the Chinese themselves associated [tea] with the introduction and spread of the Buddha-dharma [i.e., laws of the Buddha]...Virtually all early teas are named for mountains which were also sites of large monasteries...Buddhist monks gradually developed the various types of white, green, and oolong tea... the monks used tea every day as an aid to meditation..."

[http://www.teamuse.com/article\\_020901.html](http://www.teamuse.com/article_020901.html))

"Numerous animal studies show that soy foods cause infertility in animals. Soy consumption lowers testosterone levels in men. Tofu was consumed by Buddhist monks to reduce [desire]...Dietary estrogens in the form of soy foods were found to have the potential to disrupt the endocrine system with the effects in women similar to taking the breast cancer drug tamoxifen [which blocks estrogen]..."

<http://www.westonaprice.org/health-topics/abcs-of-nutrition/principles-of-healthy-diets-2/>)

"...the author selected **12 monks from Buddhist monasteries** where the **rules of celibacy** and the **avoidance of animal foods** are strictly observed...Their diet consists chiefly of rice and barley **with soy bean products, such as soy sauce and miso**, vegetables of a number of sorts, **rape seed oil** and similar materials...As is usual in Japan, the rice and other dishes are commonly cooked **with soy sauce**, judging by the details supplied regarding menus...the subjects did not weigh as much [97-114 lbs] as the average American..."

*(Chemical Abstracts, Volume 4, 1910)*

"*Just How Much Soy Did Asians Eat?* In short, not that much...According to KC Chang, editor of *Food in Chinese Culture*, the total caloric intake due to soy in the Chinese diet in the 1930's was only 1.5%...Writing in the Chinese Journal of Physiology in 1928, Tso noted that soybean milk is a native food used in certain parts of the country as a morning beverage but it is little used as part of the diet for children. Its nutritive properties as a food for young infants are practically unknown...Eight years later, Tso's comments were still valid...In a later publication, Guy reported...that 'contrary to Western notions' it was not usual to feed soy milk to infants (Guy RA and Yeh KS. Chinese Med J. 1938; 54:1-30)...Asia is a huge market for the soy industry and the soy industry efforts to convince Asians that their ancestors ate much more soy than they actually did are purely profit driven. We view the attempts of the soy industry to re-write the history books with the contempt it deserves."

<http://articles.mercola.com/sites/articles/archive/2000/01/09/truth-about-soy.aspx>)

-Testosterone levels in men today have been found to be 25% lower than levels in the 1980s.

"Masculine ideals of strength coupled with strong family ties can help men combat depression and overcome thoughts of suicide, according to new research... men's strong sense of masculine roles and responsibility as a provider and protector enables men to hold on..."

(<https://www.sciencedaily.com/releases/2010/06/100616151637.htm>)

-There is no significant difference in the testosterone levels of **socially dominant but non-aggressive** prisoners and of aggressive prisoners (Ehrenkranz, Bliss and Sheard 1974).

#### CURSES ASSOCIATED WITH HIGH TESTOSTERONE IN WOMEN:

1. Women with **high Testosterone** had a significant increased risk of fibroids, etc: (J Clin Endocrinol Metab. 2016 Jan;101(1):123-30. doi: 10.1210/jc.2015-2935. Epub 2015 Dec 15; etc.)
2. Women with **high T.** levels were more likely to have impaired math skills. (Men were the opposite): (Colin Hamilton, *Cognition...*)
3. Women with **high T.** have more promiscuity, affairs and broken marriages.
4. Girls born to women with **high T.** while pregnant, show greater preference for boy's toys.
5. Pre-pubertal girls with **higher levels of T.** have more interest in masculine activities (McHale et al. 2004); and they have more resistance to parental socialization efforts encouraging feminine behavior (Udry 2000).
6. Women with **high T** had *less* interest in [men, or their husbands - 1 Cor. 7:3-5; Hebrews 13:4;]; but had *more* perverted, selfish desires: (University of Michigan)
7. Postmenopause women with **higher T.** scores were more likely to develop br. cancer.
8. Women with **higher T.** reported more acne.
9. Women with **higher T.** have greater risk for heart disease: (The Endocrine Society, November 5, 2009)
10. Early postmenopause women with **higher T.** levels have increased insulin resistance (pre-diabetes).
11. Women with **higher T.** levels had a greater appetite for risky behaviour and choices.
12. Women with **higher T.** have more depression and mood disorders: (<http://www.femhealth.net/>)
13. Women with **higher T.** tend to have deeper voices, more facial hair, baldness, and in general, a less feminine physical appearance.
14. **Higher T.** levels in women are linked to criminal violence and aggressive dominance (e.g., among prison inmates, women with higher testosterone levels committed more acts of unprovoked violence).
15. Women with higher levels of masculinity (androgynous, etc.) had **higher T.** levels than did the more feminine women: (J Pers Soc Psychol. 1985 May;48(5):1218-26.)
16. Women with **higher T.** perceive themselves as *self*-directed. Women with lower T., view themselves as socialized and caring: (J Pers Soc Psychol. 1985 May;48(5):1218-26.)

17. Women with **higher T.** are more ruthless, imperious (bossy):  
(<http://www.independent.co.uk/news/science/ruthless-women-have-extra-testosterone-scientists-show-1776769.html>)
18. Women with **higher T.** levels are more at risk of miscarriage.
19. Women who have **high T.** levels tend not to ovulate (produce a mature egg).
20. Women with **higher levels of T.** had significantly lower levels of success at nursing babies.
21. Premenopause women with **higher levels of T.** shed fewer tears.
22. Women with **higher T.** tend to wear more, and bolder make-up (in contrast, higher levels of estrogen are associated with brighter, clearer "rosier" skin - the "glow"):  
(Researchers at the University of Glasgow; or see Jezebel in 2 Kings 9:30)
23. Women with **higher levels of T. were** less likely to marry, and assigned a lower priority to marrying: (Udry, Morris and Kovenock, 1995).
24. Women with **higher levels of T.** were less interested in children and had fewer children.
25. **High T.** in women can cause high blood pressure, fatty liver disease and sleep apnea (Mayo Clinic).
26. **High T.** in women is associated with personality changes such as competitiveness, irritability, increased selfishness, and excitability (and are more likely to express their competitive feelings through verbal aggression).
27. Women with **high T.** show less interest in babies, or nurturing.
28. Women with **higher T.** view themselves as impulsive and independent.
29. Women with higher T perceived themselves as less civilized, rational or warm.
30. Women with higher testosterone levels tend to smile less often.
31. Female rats with **higher T. attacked** their male mates!

"...wielding power increased testosterone in women..."

(<http://www.pnas.org/content/112/45/13805>; "Effects of gendered behavior on testosterone in women and men")

"*Women's Testosterone Levels Rise Even When They Just Act Like They Have Power...*"

(<https://lsa.umich.edu/psych/news-events/all-news/archived-news/2015/10/women-s-testosterone-levels-rise-even-when-they-just-act-like-th.html>)
