

Discerning the Times: CV-19 News, Satan's Shoes and Rebounding

Hello Monday Readers! A lot to go over this morning so I will do my best to keep things concise for you and leave the deep research up to each reader.

VAERS

[VAERS](#) stands for Vaccine Adverse Event Reporting System and it is one of the resources used to track injuries or even deaths that are alleged to have occurred due to a person receiving a vaccination. However, it's a bit misleading simply because neither the government nor pharmaceutical companies accept any liability of harm or death that may be due to vaccinations. The immediate reason has to do with the fact that President Ronald Reagan signed into law the bill that provides immunity to the pharmaceutical companies. The second reason is due to the fact that allegations of harm, injury or death by individuals who received a vaccination do not necessarily prove that it was the fault of the vaccine itself that caused the harm or death.

That being said, it is interesting to note that as of March 19, 2021, the following have been reported to VAERS:

- Deaths: 2050
- Hospitalizations: 4450
- Urgent Care: 7485
- Office Visits: 6759
- Anaphylaxis: 354
- Bell's Palsy: 421
- Total: 44,606 incidents

Again, the government would stress that these events or occurrences are not necessarily due to a vaccination received. In fact, the CDC often states that they are unable to find any direct link between a vaccination and a resultant occurrence in an individual. Their position is that because of a person's unknowns regarding their own health or immune system, finding a direct link to the use of a vaccination is often impossible.

The reality appears to be though that people are experiencing harm, injuries and deaths and often after a vaccination has been administered. In that sense, it certainly appears that there is a certain amount of weight given to the fact that a vaccination does actually pose a risk for certain people. We've also talked about and referenced what medical experts on both sides of the issue have stated. All we can continue to stress is that before taking any vaccination, do the research.

Gene-Based Vaccines

As a reminder, the current CV-19 vaccination(s) include the mRNA component. As such, many within the medical field are very concerned about what *might* happen within people's bodies. Since the FDA simply provided *emergency authorization use* for the pharmaceutical companies, allowing their

vaccines to be used only as an emergency (yet they are increasingly being used wholesale way beyond the parameters of emergency use), this means that both detailed animals studies and long term studies based on human trials were simply not done.

The result? The "studies" are currently underway in human beings. Surely, everyone has the freedom to choose their own particular course of action. Me? I'd rather err on the side of caution and either not get the vaccination or wait until all the "testing" has been done to determine what are the actual results. For now, it certainly appears that there is a good deal to question.

New York's Vaccine Passport

Under Gov. Cuomo, New York has begun adopting what they call the "[Excelsior Health Passport](#)," which will allow each person to prove that they've had a negative test for CV-19 or that they've had the CV-19 vaccine. This will allow these people to enter where other people are ostensibly not allowed to go, like Madison Square Garden. This new, digital passport will allow people in New York to return to some semblance of normalcy.

While many certainly like the idea, my concern is the apparent invasion of privacy; that is, having to prove that you are not contagious and/or that you have had the soon-to-be-required vaccination. The federal government is making similar moves and at this point, it's difficult to know how this will affect society in general.

I've said it before as have many others that it would appear that CV-19 is far more about control than about our health. I know I'm not alone in that thinking.

Vaxxed vs Unvaxxed?

This all segues into a growing concern among the public. That is, the growing divide between those who submit to vaccination and those who do not. In an op-ed from [AZCentral](#), they speak of the previous segregation between smokers and non-smokers that essentially took over society. They wonder aloud whether or not the growing divide between those who received the vaccination and those who will not receive it will actually be worse?

I think, in all probability, it will be much worse. I recall when masks were highly recommended and many stores and businesses began making them mandatory. Some who refused to wear masks (for health or other reasons), were often verbally assaulted and made to feel as though they were walking around "killing" people because they chose to not wear a mask. There are still people who continue to think this way.

With all of the mixed messages regarding the CV-19 vaccination, it's not beyond the realm of credulity to believe that people will begin to look upon those who will not get the vaccination as potential murderers. As I've pointed out before, based on the comments and research of many within the medical field, those who get the vaccination may actually provide more of a risk of contagion for others in society including

those who have not gotten the CV-19 vax. We really do not know but it certainly appears there is a major rush to judgment and things are definitely ramping up so that those who choose to not vaccinate are increasingly going to find themselves in a more precarious position within society.

Gasping with a Mask

I recently watched a short video on a social network. I tried to download it but only managed to screen grab an image. In the video, the woman wearing the pink mask (lower right), can be heard speaking at a meeting. She is obviously agitated and as she continues speaking, her breathing falters and she becomes even more agitated with long pauses between words. I'm not a doctor but it certainly appears to me that this is a result of her being overworked and re-breathing way too much carbon dioxide. At one point, she almost seems like she becomes a bit catatonic. On the few occasions when I have to wear a mask, I do my best to keep myself relaxed even though I'm fighting the feeling of claustrophobia.

If you look at the photo, it is clear that people are already social distancing. So, does social distancing work? Does wearing a mask work? Are they both needed even if a CV-19 vaccine is received? According to Dr. Fauci, yes, all things are still needed, which makes absolutely no sense to me, especially given the fact that many doctors and epidemiologists are warning that constantly social distancing, wearing a mask and washing our hands umpteen times a day does not allow our immune system to do its job and herd immunity has a much more difficult time coming into play.

Depopulation Program?

A [former Pfizer VP makes the claim](#) that the current CV-19 vaccination may well be part of a depopulation program. If you read the linked article, he holds no punches. He believes that it is "madness" to vaccinate entire populations for CV-19 when in point of fact, it should be simply provided to those groups who are most at risk. Please read the short article.

Satan Shoes?

When I first read about this, I was surprised and even offended, thinking that the shoe company, Nike, had gone way off the rails in producing a shoe dedicated to Satan himself. It actually turns out that the shoes are *not* produced by Nike at all. A rapper by the name Lil Nas X (real name is Montero Lamar Hill), along with the art collective, MSCHF, *bought* 666 pairs of Nike AirMax shoes. They then went to their creative boards and created a shoe they call "Satan Shoes". The shoes are of course, limited to 666, numbered and the soul of each shoe has red ink along with a drop of human blood. Nike fully denies any involvement in the product and it would likely be difficult for their lawyers to issue a cease and desist since what Nas X is doing is no different from buying some Ford Mustangs, souping them up and adding designs to them and then reselling them at a profit.

These shoes retail for just over \$1,000 per pair and I believe they go on sale today. This particular rapper has also produced Jesus Shoes

that sold for much higher and sold out very quickly. I'm sure these Satan Shoes will also sell out quickly as well. The saddest part is that I can actually see some people literally killing someone else just to get their shows!

So what I originally thought was Nike completely selling out turns out to be the marketing schemes of a rapper and his crew. If they sell all 666 pairs of Satan Shoes, they'll stand to make nearly \$700,000 (less their overhead). Bottom line? This is a marketing ploy, though this particular rapper seems to have a penchant for Satan as he has produced at least one video where he gives Satan a lap dance. Apparently, at the end of the video, Lil Nas X kills the devil, becoming Satan himself.

This type of thing is par for the course because of the god of this age; Satan. He's coming out into the open and many are embracing him wanting the power that he is able to provide. If we stop to consider it, almost all else has been tried so moving into this area seems plausible for many to most because of the growing darkness throughout the world. We know that as we ramp up toward the coming Tribulation period, it seems clear from Scripture that evil will rise to the surface and by the time the Mark of the Beast is issued and made mandatory, it also appears that most of the world will gladly receive that mark. We certainly need to pray for people like this.

Progesterone to Men for CV-19?

Apparently, a new study has come out that indicates that the hormone progesterone (which the article incorrectly states is a "female" hormone), is a potential adjunct to treat men with CV-19. This stems from a study coming out of a Los Angeles, CA hospital. You can read more about this study at this link: [Cedars-Sinai](#)

What is a bit disconcerting here is that progesterone is *not* solely a female hormone. Men also have progesterone, though in normally smaller amounts than women and women have testosterone though the amounts of progesterone in men and testosterone in women is much smaller than the counterparts. As men age, it appears that they produce less progesterone than they use to produce (even though it was a small amount before).

Doctors involved in this study believe that progesterone *may* offer benefits to women that are not readily available to men since it also appears to these doctors that men are disproportionately infected with CV-19 than women. It offers some possibilities, but it also seems clear (at least from my research), that too much progesterone in men creates unbalanced hormones and can cause certain unwanted side effects. I'm sure they're proceeding with caution.

Rebounding for Health

Do you know that you do not get enough exercise? Do you know where to start or how best to achieve the exercise you need? Rebounding is simply jumping on a small, personal-sized

trampoline. The problem as we age (and I can relate), is that our bodies cannot do what they used to do. But we can and should continue exercising with the *right* exercise to help push off aging effects. Here's an article that [highlights over 200 benefits of rebounding](#) for about 12-15 minutes per day. These benefits are backed up by NASA.

Our bodies are the Temple of the Holy Spirit. We all need to take care of it because for now, it's the only one God has given us.

Have a great day in the Lord, everyone!
